

INSTALLATION INSTRUCTIONS

PART NUMBER	158-1634B (ORANGE)
PART DESCRIPTION	KEGEL K2 BATTERY
REV DATE	6/5/19
MACHINE MODELS	ALL BATTERY OPERATED LANE MACHINES

Basic knowledge of the operation of the lane machine

Please read prior to installation:

If you are upgrading your lane machine, please verify that you have acquired the necessary installation kit that is not included with the battery.

ION Model A or B you will need part number 158-8654

All other battery operated machines will need part number 158-8655

TECHNICAL NOTE

Please thoroughly read the instructions prior to performing the installation of this assembly.

To avoid any potential problems, if at any time during the process you have a question, stop and contact our Tech Support department at the numbers listed below.

Rev. 7/16

To obtain optimum life and performance out of your battery, it is best to charge after EVERY use using an OEM 20 Amp KEGEL approved charger!

This replacement battery is shipped with only a 30% charge. After installation in machine, the battery MUST be fully charged to 100% prior to first usage.

When running the machine only once per day, the maximum amount of lanes that can be done is 62 lanes. When running the machine twice per day, the maximum amount of lanes that can be done is 46 lanes per cycle, or a total of 92 lanes per day. This means that you can run 46 lanes (or less), recharge the battery at least 4 hours, and then run another 46 lanes (or less) for a total maximum of 92 lanes per day.

Register your battery for warranty purposes at
<http://kegel.net>

This replacement ProNautic[®] battery charger is Kegel factory pre-set for **Calcium/Custom** for the K2 Lithium Battery.

If the charger is being used with AGM batteries, it must be re-programmed as follows:

- Press and hold the SET UP / ENTER button on the charger for 5-10 seconds
- Press the UP or DOWN arrow until the LED lights up @ PRE-SET 2 for AGM
- Press the SET UP / ENTER button to confirm selection

Using a voltmeter, check the DC voltage at both the disconnect housing & the two-pin plug and verify against the voltmeter on the charger. Voltage should be between 27V – 29V

For proper charging: It is necessary to plug the charger into the machine first then power the charger. When the charger is being unplugged, it is necessary to remove power from the charger, allow the charger to shut down then unplug the charger from the machine.

DO NOT leave the charger plugged into power when the charger is not in use. The charger will have the appearance of working properly when actually it could shut down the DC output voltage.

If the ProNautic Charger does not recognize a connection to batteries or the lane machine, or if it detects a bad ground or connection on the AC power side the charger will NOT charge properly.
