1. Unscrew the 8-32 x 3/8" screws with lock washer that secure the brush pad top plate in place on top of the smoother assy. Remove plate.
2. Remove the existing blocks from the assembly, being careful not to lose the springs.
3. Remove the old Velcro piece off the block. Use some acetone to remove any residue left behind by the old Velcro.
4. Peel the backing off the new piece of Velcro and place on the block. Trim any excess Velcro that may be protruding beyond the edge of the block.
5. Install the smoother block back into place. Place the (2) springs in the holes in the back of the block. Holding these springs, insert opposite end of springs into the holes in the base block. Holding the blocks down and in, place top plate back onto block and re-install screws to secure.
6. All of the blocks should move freely when re-installed and pivot front to back & side to side. If not, remove blocks in question and trim flush w/ ends of blocks.
